

Unique reporting function direct from needle detector to your PC

Our new reporting function, offers manufacturers a total reporting facility direct from your York Detection needle detector to your PC enabling you to track performance and any incidents of needle contamination in your factory.

Meet the needs of your retail customers and ensure you win new business with this unique reporting facility, offering up to a month's data storage. You will fulfil your own factory's needle management requirements with this package and those of your retail customers.

- ◆ 8Mbyte Flash Memory storage capacity – minimum 1 month production data*
- ◆ Time/Date stamped events - product & reject counts, machine calibration data
- ◆ Multiple user configurable batch-specific information fields – customised reports
- ◆ Comprehensive management reports between any two given dates
- ◆ Unique ability to demonstrate/vet vendor compliance – due diligence audit trail
- ◆ Download and save to PC off line – no need for a permanent printer connection

*Based on 25,000 items per day / per shift
